(\*) For diesel engines 1.6 MJet and 2.0 MJet, in the event of an emergency in which the original products are not available, lubricants with at least ACEA C2 performance are acceptable; however, in this case optimal engine performance is not guaranteed and the lubricant should be replaced as soon as possible.

The use of products with specifications below ACEA C3 - SAE 5W-40 standards for petrol engines and ACEA C2 standards for 1.6 MJet and 2.0 MJet diesel engines may cause damage to the engine not covered under the warranty.

(\*) For TCT versions

In the event of an emergency, if lubricants with the prescribed specifications are not available, products with the minimum indicated ACEA performance can be used for topping up; in this case optimal performance of the engine is not guaranteed.

For MultiAir system engines only use lubricants with indicated SAE grade and specifications.

The use of products with specifications other than those indicated above could cause damage to the engine not covered by the warranty.
